Physical Security Systems Vendor Guidance

Physical Security – Access Control System – OneKey Enterprise Network

OneKey is the preferred access control system for P&G. The purpose of the OneKey PAC system is to standardize physical access control systems at P&G locations. This is accomplished through a standardized playbook and global integrators. OneKey PAC requires strong site ownership to successfully implement and manage the physical access ongoing.

OneKey PAC is a globally designed and locally implemented physical access control system that will deliver a global visual identity via a standard badge design and global cross site access via standard regional systems and badges. All the main components of the system have been designed, tested and sourced globally. The system runs on regional servers located in each of the main regional P&G data centers. Each server connects to local control panels that manage access within the site. The OneKey PAC system is tied to the P&G LDAP directory which allows provisioning of access according to location and HR/IT status.

  ➢ For additional details contact the OneKey Enterprise System Implementation Manager, Jay Yelton yelton.jj@pg.com

Physical Security – All other site Physical Security Systems (cameras, recorders, revolving doors, turnstiles, etc.) and Contract Guarding Services

Physical Security at P&G is designed to provide a safe and secure work environment through the prevention of unauthorized access to P&G owned and leased facilities. For existing and new Company Facilities Physical Security Systems and Contract Guarding Services must incorporate P&G Policy and Standards set up by Global Security to deliver a safe and secure work environment.
